

# INNOBULK GX

## Automatic bulk bag filling system

This system is designed for the operator to hang the bags from one side. The hanging hooks move towards the operator side allowing them to hook the bag loops on. The operator will slide the neck of the bag onto the inflatable bag clamp for a dust tight seal. The hooks then retract so the bag hangs freely allowing the product to fill the bottom corners evenly. During the weighing process a pallet is automatically feed from the pallet magazine to under the bag. Once the weighing is complete, a lift table will raise the bag. When the weight is lifted the hooks & bag clamp will release the bag automatically. The lift table then lowers the pallet onto the conveyor & indexes the full bag & pallet onto the accumulation conveyor, ready to be removed by a forklift

**PACKWEIGH**  
INNOVATIVE PACKAGING SOLUTIONS

## Features

- Suitable for all bag sizes
- Rinstrum panel mount weigh controller
- LCD display with LED back lighting 24vdc controls
- Pallet dispenser
- Optional slip sheet dispenser
- Auto bag release
- Empty bag storage
- Full pallet accumulation
- Operator platform

Also available in a pallet less system

## About Packweigh

Packweigh Equipment design & manufacture as well as import equipment from all over the world, and with a modern workshop and engineering department, can furnish an innovative solution to supply you with equipment to suit your specific needs.

Packweigh Equipment also carries an extensive range of spare parts and has the expertise and staff to service your machinery for smooth and trouble free operation.
